CA LAB 6 Proquell

Pseudo-code: Amdahl's Law Function

1) Start
2) Read f (fraction improved) and S (speedup of that part)
3) If f is less than 0 or more than 1, show an error and stop
4) If S is 0 or less, show an error and stop
5) Calculate the new time:
   new = (1 - f) + (f/S)
6) Calculate the speedup:
   speedup = 1 / new
7) Show the new time and the speedup
8) End.

CamScanner

Example

$f = 0.6$, $s = 2$

$new = (1 - 0.6) + (0.6 / 2)$

$= 0.4 + 0.3$

$= 0.7$

Speedup $= 1 / 0.7$

$= 1.43$
